1.0 INTRODUCTION

The McDonnell Douglas Realty Company (MDRC) C-6 Facility, formerly the Douglas Aircraft Company (DAC) C-6 Facility, is located at 19503 South Normandie Avenue, Torrance, California (Figure 1). Quarterly groundwater sampling is being conducted in response to the California Regional Water Quality Control Board - Los Angeles Region correspondence to DAC, dated 7 April 1992. This report summarizes laboratory analytical data generated through the chemical analysis of groundwater samples collected 6, 7, 8, and 9 May, First Quarter 1997.

2.0 QUARTERLY MONITORING PROGRAM

First Quarter 1997 groundwater sampling was performed in accordance with standard sampling procedures. Static water level depths were measured on 6 May 1997, prior to initiating purging of groundwater from any observation well. Static water depths in observation wells (MW-8, MW-9, MW-18 and MW-19) located in the southern portion of the MDRC property installed for the Montrose Chemical Corporation Remedial Investigation were not measured for this quarter.

Groundwater samples were collected from the following fifteen wells (Figure 2) and chemically analyzed for volatile organic compounds (VOCs) by EPA Method 8240/8260 for the First Quarter 1997.

WCC-1S, WCC-2S, WCC-3S, WCC-4S, WCC-5S, WCC-6S, WCC-7S, WCC-8S, WCC-9S, WCC-10S, WCC-11S, WCC-12S, WCC-1D, WCC-3D, and DAC-P1.

Table 1 summarizes observation well construction details. Tables 2 and 3 summarize the results of chemical analysis of groundwater samples and duplicates for major and minor constituents at the C-6 facility, respectively. Chemicals detected in samples from each observation well are shown in Figure 3. Table 4 summarizes available measured groundwater elevations to date. Estimated groundwater elevation contours for the First Quarter are presented in Figure 4. Historical chemical concentration profiles for the indicator chemicals trichloroethene and 1,1-dichloroethene are shown in Figure 5. Copies of laboratory data sheets, groundwater purge and sample forms, and Chain-of-Custody records are included in Appendices A, B, and C respectively.

2.1 Groundwater Sampling Procedures

Prior to collecting groundwater samples from each well, groundwater was purged using an electrical submersible pump that was temporarily installed in the observation well. After lowering the pump to the approximate mid-point of the saturated well screen, approximately three to five wetted casing volumes of groundwater were purged from the well until the following groundwater monitoring parameters had stabilized to within 10% of preceding values: pH, electrical conductivity, and temperature. Purged groundwater was stored onsite in DOT approved 55 gallon barrels pending the results of laboratory analysis of samples.

Following groundwater purging, the flow rate of the submersible pump was reduced to 200 milliliters/minute. To collect a representative groundwater sample, the pump intake valve was positioned at the approximate mid-point of the saturated well screen interval. The recovered water was discharged into three labeled 40-ml capacity vials, preserved with HCl.

2.2 Field QA/QC Procedures

Duplicate groundwater samples were collected for the sampling round on 7, 8, and 9 May 1997 for quality control purposes. The duplicates were collected in three HCl-preserved vials and identified by inserting the collection date after "DUP-" (DUP-050797, DUP-050897, and DUP-050997). No further sample identification was provided to the laboratory. Duplicate samples were taken on 7, 8, and 9 May from observation wells WCC-2S, WCC-3S, and WCC-6S, respectively.

Following decontamination of the submersible pump, and prior to collection of groundwater samples from the successive well, an equipment rinsate blank was prepared for laboratory analysis. The equipment rinsate blank was prepared by pouring Reagent Grade II water, prepared by the analytical laboratory, over the pump and collecting the rinsate in two 40-ml vials preserved with HCl. The blank was identified following a similar protocol to that used for duplicate water samples and is identified as "EB" followed by the date. EB050997 was collected after sampling well WCC-6S. A trip blank was also analyzed for sampling and shipping activities and was identified as TB-050797.

All groundwater, duplicate, and field blank samples were transported in ice-cooled chests to Quanterra Environmental Services, Santa Ana, California using U.S. EPA-recommended Chain-of-Custody procedures.

3.0 EVALUATION OF ANALYTICAL RESULTS

3.1 Groundwater Gradient

Groundwater levels were measured prior to sampling on 6 May 1997 (Table 4 and Appendix C). The shallow zone groundwater elevations measured for this quarter ranged from 13.78 feet below mean sea level (MSL) to 15.19 feet below MSL, reflecting a rise in groundwater elevations of about 0.38 feet since the last quarter. An estimated potentiometric surface map for the shallow zone as measured on this day is presented as Figure 4. The groundwater gradient in the shallow zone was generally east to east-southeast with a southerly directed trough-like depression between observation wells WCC-12S and WCC-7S.

Insufficient data (two wells) are available to define the groundwater gradient in the deeper zone. Groundwater elevations in the two wells (WCC-1D and WCC-3D) were approximately 14.87 and 13.72 feet below MSL, respectively.

3.2 Analytical Data

The results of chemical analysis of groundwater and duplicate samples are summarized in Tables 2 and 3. Table 2 lists major constituents and Table 3 lists additional minor constituents of samples tested. The duplicate groundwater samples are indicated by an asterisk and are presented with the "original" groundwater samples. These tables include cumulative analytical data for all observation wells and detection limits (where available) for the listed chemicals.

The following observations are noted:

- Data for groundwater samples collected from well DAC-P1, located at the upgradient property boundary, indicate a TCE concentration of 15,000 micrograms per liter ($\mu\text{g}/\text{L}$) coming onto MDRC property (Figure 3). Previously detected toluene was not detected in this sampling. The concentration of TCE remains within historical ranges. DAC-P1 is screened in the shallow zone.
- Background concentrations of TCE and 1,1-DCE decreased in the shallow zone cross gradient well WCC-2S and increased in upgradient or WCC-11S. Both contaminants are within historical ranges at concentrations of 25 to 170 $\mu\text{g}/\text{L}$ of TCE and 12 to 33 $\mu\text{g}/\text{L}$ of 1,1-DCE.
- Groundwater elevation data (Figure 4) and chemical concentration data (Figure 3) indicate that chemical transport in the shallow zone is generally in a southerly and southeasterly direction in the vicinity of buildings 36 and 41. Most chemical concentration data from the eastern boundary observation wells (WCC-5S, and WCC-9S) are within the same range or lower than upgradient or cross gradient "background level" wells (WCC-2S and WCC-11S).
- In general, variances of the other chemical concentrations since the last sampling remain within typical historical ranges.
- Low concentrations of 1-methylethylbenzene (MEB) were detected in samples collected from wells WCC-5S and WCC-9S at 1.2 and 1.0 $\mu\text{g}/\text{L}$, respectively.
- Purged water from WCC-2S was black at the beginning of the purge, and light gray at the end. This discoloration may be due to debris that fell into the well when the surface concrete box was damaged during demolition activities. Laboratory results for WCC-2S are within normal ranges, and were not affected by the debris.
- Analytical data from the equipment rinsate blank, sample duplicates, trip blank, and laboratory spikes and duplicates are indicative of reliable data.

Notes:

ug/l = micrograms per liter

1,1-DCE = Dichloroethene

1,1-DCA = Dichloroethane

1,1,1-TCA = 1,1,1-Trichloroethane

TCE = Trichloroethene

MIBK = Methyl Isobutyl ketone

cis-1,2,-DCE = cis-1,2-Dichloroethene

trans-1,2-DCE = trans-1,2-Dichloroethene

MEK = Methyl ethyl ketone

- = Detection limit not available

* = Samples with dual entries had duplicate samples collected. xx/xxx = original sample / duplicate sample.

<5 = Result fell below detection limit shown.

Notes:

ug/l = micrograms per liter

PCE = 1-Tetrachloroethene

1,1,2-TCA=1,1,2-Trichloroethane

1,2-DCA = 1,2-Dichloroethane

- = Detection limit not available

* = Samples with dual entries had duplicate samples collected. xx/xx/xx = original sample / duplicate sample.
<5 = Result fell below detection limit shown.

Notes:

1. Reference point is north side, top of well casing
2. Reference point elevation measured by Hargis + Associates, Inc.
3. Well WCC-6S could not be opened on 20 September 1995. The water level elevation shown was measured on 6 September 1995.
4. Installed by Hargis + Associates, Inc. for Montrose Chemical Corporation
5. NA - Not Available
6. Data taken from Woodward-Clyde Consultants Phase II Report, May 1988.
7. Data taken from Woodward-Clyde Consultants Phase III Report, May 1990.
8. Water Level Elevation not measured due to wellhead obstructions.

Notes:

1. Reference point is north side, top of well casing
2. Reference point elevation measured by Hargis + Associates, Inc.
3. Well WCC-6S could not be opened on 20 September 1995. The water level elevation shown was measured on 6 September 1995.
4. Installed by Hargis + Associates, Inc. for Montrose Chemical Corporation
5. NA - Not Available
6. Data taken from Woodward-Clyde Consultants Phase II Report, May 1988.
7. Data taken from Woodward-Clyde Consultants Phase III Report, May 1990.
8. Water Level Elevation not measured due to wellhead obstructions.

LIMS NO.: 125886-0001/0020
DATE SAMPLED: 7/8/9-MAY-1997
DATE SAMPLE REC'D: 9-MAY-1997
PROJECT: DAC

Enclosed with this letter is the report containing the analytical results for the project specified above.

The Narrative section included in the following attachment provides a detailed description of all events that occurred during sample processing, analysis, and data review as applicable to the samples and analytical methods requested.

Report data sheets contain a list of the requested constituents measured in each test, the analytical results, and the standard reporting limits (RLs). Reporting limits are adjusted to reflect any dilution or dry weight correction, when applicable. Also provided in this report are the LIMS Report Key and the terms and abbreviations commonly used in our reports.

Preliminary data were provided via fax to Rus Purcell on May 23, 1997.

The report shall not be reproduced except in full, without the written approval of the laboratory.

If you have any questions regarding the data provided in this report, please call Pat Abe at (714) 258-8610. Release of this report has been authorized by the Lab Director or the designee as demonstrated by the following signature.

Sincerely,

Pat Abe
Project Manager

LIMS REPORT KEY

Section	Description
Cover letter	Signature page, report narrative as applicable.
Sample Description Information	Tabulated cross-reference between the Lab ID and Client ID, including matrix, date and time sampled and the date received for all samples in the project.
Sample Analysis Results Sheets	Lists sample results, test components, reporting limits, dates prepared and analyzed and any data qualifiers. Pages are organized by test.
QC Lot Assignment Report	Cross-reference between lab IDs and applicable QC batches (DCS, LCS, SCS, Blank, MS/SD, DU)
Duplicate Control Sample Report	Percent recovery and RPD results, with acceptance limits, for the laboratory Duplicate Control Samples for each test are tabulated in this report. These are measures of accuracy and precision for each test.
Laboratory Control Sample Report	Percent recovery results for a single Laboratory Control Sample (if applicable) are tabulated in this report, with the applicable acceptance limits for each test.
Matrix Spike/Matrix Spike Duplicate Report	Percent recovery and RPD results for matrix-specific QC samples and acceptance limits, where applicable. This report can be used to assess matrix effects on an analysis.
Single Control Sample Report	A tabulation of the surrogate recoveries for the blank for organic analyses.
Method Blank Report	A summary of the results of the analysis of the method blank for each test.

List of Abbreviations and Terms

DCS	Duplicate Control Sample	MSD	Matrix Spike Duplicate
DU	Sample Duplicate	QC Run	Preparation batch
EB	Equipment Blank	QC Category	LIMS QC Category
FB	Field Blank	QC Lot	DCS batch
FD	Field Duplicate	ND	Not Detected at the reporting limit expressed
IDL	Instrument Detection Limit	QC Matrix	Matrix of the laboratory control sample (s)
LCS	Laboratory Control Sample	RL	Reporting Limit
MB	Method Blank	QC	Quality Control
MDL	Method Detection Limit	SA	Sample
MS	Matrix Spike	SD	See MSD
RPD	Relative Percent Difference	TB	Trip Blank
ppm (parts-per-million)	mg/L or mg/kg	ppb (parts-per-billion)	$\mu\text{g}/\text{L}$ or $\mu\text{g}/\text{kg}$
QUAL	Qualifier flag	DIL	Dilution Factor

Refer to the Quanterra Incorporated Quality Assurance Management Plan for detailed explanations of terms summarized above.

B. QC Summaries	

CASE NARRATIVE

LIMS # 125886

I. CONDITION UPON RECEIPT

Cooler was received intact. The temperature of the cooler was 4.1°C.

Sample containers were received intact. The VOA vials did not contain headspace. Sample container labels did agree with the COC as to sample ID, collection date/time and requested tests. Sample DUP-050897 was not listed on the chain of custody (COC) documentation; it was logged in as discussed with Rus Purcell on May 9, 1997.

Samples were received in time to meet the method holding time specifications.

II. ORGANIC ANALYSES (BY METHOD: SW8260)

HOLDING TIME

All samples were prepared and analyzed within the method-specified holding time requirements.

METHOD BLANK

All method blanks met method- and/or project-specific QC criteria.

MS/MSD/LCS/DCS AND RPDs

All spike recovery and RPD data met method- and/or project-specific QC criteria. MS/MSD recoveries could not be calculated for 1,1-dichloroethene and toluene in MS Run 21 MAY 97-BCA due to high constituent levels in the sample.

SURROGATE RECOVERIES

All surrogate spike recoveries in samples and in QC samples met method- and/or project-specific QC criteria.

CALIBRATIONS

All calibrations and calibration verifications met method- and/or project-specific QC criteria.

1000 Noticed that IT Corp. is no longer on site. I began making preparations to order drums from an outside vendor. I also used IT's decon facility on past monitoring events so it will have to build a decon pad + find water + power.

1030 Enviro Supply in Fountain Valley can ~~not~~ deliver 11 drums to site today at 1 O'clock + 9 more tomorrow morning.

Left site to buy supplies for decon.

1:00 Returned to site.

1:30 Courier arrived at site with drums.

1:30 Left site.

Work Report (Work done, Personnel/Equipment working)

0700 Arrived at DAC. Began preparing to purge + sample monitor wells.

1020 Finished decon before first well + began setting pump into well # WCC-55.

Decon consists of steamcleaning the exterior of the pump, hose + head then pumping first soapy water then fresh water through pump + hose.

Decon is performed before every well.

1615 Began purging WCC-25. Note: Original crimp box was broken but has been replaced. The well casing elevation is unchanged. Collected duplicate sample from this well. Initial water from well was very black.

1720 Finished Final decon + left site.

Work Report (Work done, Personnel/Equipment working)

0630 Arrived at site. Performed first decom + began preparing to purge + sample wells.

0745 Began purging well # WCC-11S.
- Crispy box has been broken + lid is loose off over well. Casing is in good condition + well is covered with orange cones to prevent further damage.

1016 Noted that crispy box for well # WCC-8S is broken with only one bolt securing lid. Completion will have to be rebuilt.

1600 Collected sample from last well of the day (WCC-35).

1700 ~~left~~ site. Will do final decom + leave site.

Sampling, Testing See notesVisitors to Site Maness forklift operator

Work Report (Work done, Personnel/Equipment working)

0730 Arrival at site, performed first decon + began preparing to purge + sample well # WCC-6S.
 - Jay Knight + operator from Maness are already on site to move purge water drums to the storage area North of Building 18.

0813 Began purging WCC-6S.
 Will collect duplicate sample from this well.

0830 Collected sample # WCC6S-18 + Dup-050997.
0901 Finished decon + collected Equipment Blank # EB-050997 by pouring lab prepared water over the clean pump assembly + collecting the rinsate in 3 - VOA's.

Distribution: Inspection File (orig)

Field File

By 

Job Title DAC Job No. 944016.02
Date 5/9/97 Sheet 2 of 2

0917 Began purging well # DAC- PI.

0950 Finished purge + collected sample # DACPI-18.
Maness moved the last of the purge water drums to the storage area about 100' East
of well DAC- PI + left site.
Say Knight also left site.

1035 Courier from Quantexra Labs arrived on
site. I relinquished samples to him.

1100 I left site after demobilizing decon station
+ double checking labels on drums.

Inspector
